KURUVA RADHAKRISHNA

+91 7815851788 | kuruvaradhakrishna77@gmail.com | LinkedIn | GitHub | LeetCode

Education

National Institute of Technology, Delhi 2022 – 2026
B.Tech in Electronics and Communication Engineering, Minor in AI/ML *8.89/10 CGPA*

FIITJEE, Vijayawada 2020 – 2022
Intermediate *96.6%*

Work Experience

Meesho Jul 2026 – Present
Business Analyst 1 (BA-1) – Promise Accuracy | Certificate *Bengaluru, India*

- Diagnosed delivery-promise breaches across **lane, weather, backlog, and operational cuts**, identifying rigid single-quantile calibration as a key driver during sale and disruption periods.
- Designed a **per-lane calibration layer** using historical performance and contextual signals, reducing delivery breach to **<5%** without materially inflating promised dates; experiment currently covers **40% of the platform**.
- Architected an **agentic RCA workflow** using **Databricks Genie and Claude** to investigate delivery metrics across multiple levels of the metric hierarchy and surface likely operational drivers.
- Created reusable **Genie skills and prompt workflows** that generate SQL, retrieve relevant metrics, and structure root-cause investigations, reducing **ad-hoc SQL requests by 45%**.
- Automated recurring metric analysis through **n8n + Claude** workflows, reducing manual data collection and enabling analysts to focus on investigation and action planning.
- Investigated the **financial and operational impact** of delivery performance, connecting model errors and operational drivers with downstream business outcomes.

Meesho Jan 2026 – Jun 2026
Business Analyst Intern – SX:Claims *Bengaluru, India*

- Drove adoption of **Databricks Genie** and **MIA**, an internal Text-to-SQL agent, enabling business users to answer recurring data questions through natural-language queries.
- Developed **metric views and evaluation datasets** to improve the reliability of AI-generated SQL and establish a repeatable framework for evaluating analytical agents.
- Automated weekly metric reporting on **Gold-layer models** through Kaizen workflows, reducing recurring manual reporting effort.
- Analyzed **seller, claims, and payout-related metrics** to identify operational drivers, financial leakage patterns, and areas requiring deeper root-cause investigation.
- Worked across the **seller payout lifecycle**, using payout and order-level data to trace leakage, reconcile metric discrepancies, and identify breakdowns across payment stages.
- Analyzed payout leakage contributing to an estimated **Rs. 13 Cr annualized financial impact**, tracing root causes across the seller payout funnel and supporting resolution with stakeholders.
- Investigated a **Rs. 7 Cr financial leakage** linked to reverse-order scan sequencing, tracing transaction-level evidence to the underlying process gap and supporting resolution.
- Supported RCA and resolution of **seller payment issues**, connecting transaction-level evidence with operational root causes and stakeholder action items.
- Created a reusable **Seller NPS RCA playbook**, mapping key metrics and analysis paths into a structured framework for stakeholder investigations.

AlgoUniversity (backed by Y-Combinator) May 2025 – Jul 2025 | Certificate
SWE Co-Op Intern – Code Arena *Remote*

- Developed a real-time online judge using the **MERN stack**, supporting interactive coding submissions and multi-language execution.
- Built a **Docker-isolated compiler/execution layer** for C, C++, Java, and Python submissions, with resource controls and sandboxed code execution.
- Integrated **Gemini**-powered AI for code review, debugging, and conversational assistance during problem-solving sessions.
- Deployed backend workloads on **AWS EC2** and load-tested the platform with **k6** at 100 concurrent users and 46 requests/sec, achieving zero failures and sub-250ms latency under the tested workload.

Projects

CodeFlow – Distributed Code Execution Platform | Source | Live *Node.js, PostgreSQL, Redis, Judge0*

- Built an asynchronous distributed code-execution platform around **Judge0**, with a Redis-backed queue, multi-worker consumers, and PostgreSQL as the durable source of truth.
- Designed the API around **202 Accepted asynchronous processing**, persisted jobs before dispatch, and used Redis for transient coordination between API and worker fleets.
- Implemented **DB-enforced idempotency, atomic job claiming, leases, heartbeats, reaper-based recovery, and ownership checks** to handle duplicate submissions, worker crashes, and stale workers.
- Added typed retry handling with persisted retry state and backoff for transient execution failures, while distinguishing retry count from worker execution attempts.
- Benchmarked multi-worker concurrency with 100 submissions at 10 req/sec, reaching **9.35 jobs/sec** at 20 worker lanes; queue-wait p50 improved from **7.3s to 1.3s** as concurrency scaled, with zero failures in the tested mock workload.
- Instrumented **queue wait, worker processing, and end-to-end latency** separately to identify queue capacity as the primary bottleneck under load.

DevPilot – AI Software Engineering Agent | Source | Live *Python, FastAPI, pgvector, Gemini/Ollama, MCP*

- Built an AI software-engineering agent that ingests GitHub repositories with **code-aware RAG** and runs a tool-calling repair loop with sandboxed test execution and structured patches.
- Implemented **AST-aware chunking** with tree-sitter and hybrid semantic + keyword retrieval using reciprocal-rank fusion (RRF) to improve repository-level code retrieval.
- Improved end-to-end repair success from **83% to 97%** across a 36-case deterministic benchmark by diagnosing fragile line-range patches and replacing them with **AST-located whole-function replacement**; average iterations dropped from 1.42 to 1.03.
- Integrated **Gemini and Ollama/Qwen2.5-Coder**, exposed 7 **MCP tools**, and isolated test execution inside a network-restricted Docker sandbox.
- Built evaluation workflows covering retrieval quality, root-cause localization, patch application, and repair success to distinguish model limitations from failures in the surrounding agent pipeline.

AI Market Intelligence Agent *n8n, Claude, MongoDB, Slack*

- Built an automated market-intelligence workflow using **n8n and Claude** to collect, summarize, and route business-relevant information into structured outputs.
- Connected external review and market signals to **MongoDB** and Slack, turning unstructured inputs into searchable intelligence for downstream analysis.
- Added **Text-to-MQL** capabilities to translate natural-language business questions into database queries and support self-serve analysis.

LookOut – Rental Marketplace *MERN, Razorpay, Mapbox*

- Developed a full-stack rental marketplace using the **MERN stack**, with authentication, property discovery, booking flows, and location-aware search.
- Implemented **concurrency-safe booking logic** to prevent conflicting reservations and integrated Razorpay for payment workflows.
- Added **Mapbox-based location features** and structured search/filtering to support property discovery and browsing.

Football Video Analysis *Python, Computer Vision*

- Built a computer-vision pipeline for football video analysis covering **player detection, team classification, field keypoints, and ball tracking**.
- Generated tactical visualizations including **player-position maps, radar-style views, Voronoi regions, and ball trajectories** from video-derived coordinates.
- Structured the pipeline around reusable detection and tracking stages to support downstream tactical and performance analysis.

Technical Skills

Languages: Python, JavaScript, TypeScript, Java, C++, C, SQL
Backend: Node.js, Express.js, FastAPI, Spring Boot, REST APIs
Databases: PostgreSQL, pgvector, MongoDB, Redis
Frontend: React, HTML, CSS

Cloud & DevOps: AWS, Docker, Render, Vercel, Cloudflare
AI & LLM Systems: Gemini, Claude, Ollama, RAG, MCP, tree-sitter
Data & Analytics: Spark SQL, PySpark, Trino/Presto, Databricks, Superset, Kaizen, Metabase
Tools & Concepts: Git, GitHub, Postman, k6, distributed systems, queues, concurrency, idempotency, retries

Achievements & Leadership

- Advanced to **Round 3 of 4** in the **Meta HackerCup – AI Track**.
- **National Semi-Finalist**, **Flipkart GRiD 7.0** (2025) – Certificate.
- Solved **500+ DSA problems on LeetCode**; contest rating **1720** (top 12% of users).
- **Head, Database Team** – Training & Placement (TnP) Cell, NIT Delhi.
